Echocardiogram Report

March 11, 2026 - 20:57

Patient Name: Boba
Species: Feline
Age: 7y11m
Weight (Kg): 5.9kg
Referring Veterinarian: Dr. Barrios, DVM

Owner Name: Wang
Breed: Ragdoll
Sex: -Male neutered
Study Date: March 11, 2026
Veterinary Hospital: Goodvets Wynwood

History:

Routine screening. No clinical symptoms.

Echocardiogram Findings:

Left Ventricle: Normal chamber size in diastole and systole. Normal systolic function. Normal wall thickness. Left Atrium: The left atrium is normal in size.
Right Ventricle: The right ventricle is subjectively normal in size.
Right Atrium: The right atrium is normal in size.
Aortic Valve: The aortic valve is trileaflet and appears structurally normal, with normal Doppler flow velocity across the valve in systole and no insufficiency noted.
Mitral Valve: Both leaflets of the mitral valve are normal in structure and function. No insufficiency noted.
Tricuspid Valve: The tricuspid valve appears normal in structure and function. Trivial insufficiency noted.
Pulmonic Valve: Pulmonic valve appears structurally normal with normal flow across the valve in systole and no insufficiency.
Pulmonary Artery: The main pulmonary artery is normal in size in relation to the Aorta.
Aorta: Ascending aorta is of normal caliber.
Pericardium: There is no pericardial effusion noted.
There is no pleural effusion. No cardiac masses or blood clots were seen.
No visible heartworms were seen in the pulmonary artery or right atrium.

Echocardiogram Measurements:

LVIDD (mm) - 16.7
LVIDS (mm) - 7.70
LVIDDn - 0.99
IVSd (2D mm) - 3.80
LVPWd (2D mm) - 3.40
FS% - 54
LA (cm) - 1.45
LA/AO - 1.53
AV Vmax: 0.94 m/s
PV Vmax: 0.73 m/s

MV E Vel: 0.42 m/s

Clinical Diagnosis:

1. Normal cardiac structure and function based on echocardiogram.

Treatment Recommendations:

1. No cardiac medications are required.

Follow Up:

No cardiac follow-up required unless a heart murmur or symptoms of heart disease develop.
